

## RECOMENDACIÓN TRATAMIENTO

### INFORME DE BÚSQUEDA Y SÍNTESIS DE EVIDENCIA DE EFECTOS DESEABLES E INDESEABLES Guía de Práctica Clínica de Urgencia Odontológica Ambulatoria

#### A. PREGUNTA CLÍNICA

En personas con dentición permanente con diagnóstico clínico de absceso submucoso ¿Se debe realizar “drenaje canalicular (canal radicular) más drenaje quirúrgico” en comparación a “realizar drenaje canalicular”?

#### Análisis y definición de los componentes de la pregunta en formato PICO

- **Población:** En personas con dentición permanente con diagnóstico clínico de absceso submucoso.
- **Intervención:** Drenaje canalicular (canal radicular) más drenaje quirúrgico.
- **Comparación:** Realizar drenaje canalicular
- **Desenlaces (outcomes):**
  - **Críticos:** Dolor, Progresión o Diseminación infección, hospitalización, pérdida del diente.
  - **Importantes:**

#### B. MÉTODOS

Se realizó una búsqueda general de revisiones sistemáticas sobre “*Odontogenic infections*” y “*Pulp and periapical disease*”, en la plataforma Living Overview of the Evidence (L·OVE), que incluye las siguientes bases de datos: Cochrane database of systematic reviews (CDSR); PubMed; EMBASE; CINAHL; PsycINFO; LILACS; Database of Abstracts of Reviews of Effectiveness (DARE); Systematic Reviews and Policy Briefs Campbell Library; The JBI Database of Systematic Reviews and Implementation Reports y EPPI-Centre Evidence Library. Adicionalmente se condujeron dos búsquedas sistemáticas, una filtrando por revisiones sistemáticas y otra filtrando por ensayos clínicos. Se consideraron términos relacionados a la población e intervención (antibióticos) y se usaron las bases de datos: Medline, EMBASE, CENTRAL, CRD, Lilacs, Scopus y Biblioteca Brasileña de Odontología (BBO). (Anexo 1: estrategia de búsqueda para revisiones sistemáticas. Anexo2: estrategia de búsqueda para ensayos clínicos). No se aplicaron restricciones en base al idioma o estado de publicación.

Dos revisores seleccionaron de forma independiente los títulos y resúmenes, evaluaron los textos completos de los potenciales estudios a incluir y finalmente extrajeron los datos. Un investigador/clínico experimentado resolvió las discrepancias entre los revisores.

Finalmente, se seleccionaron las revisiones sistemáticas (y los estudios incluidos en éstas) y los ensayos clínicos adicionales que se relacionaran de manera directa en primera instancia, o de manera indirecta a la pregunta.

Una parte de los resultados de la búsqueda se encuentran alojados en la plataforma Living Overview of the Evidence (L·OVE), sistema que permite la actualización periódica de la evidencia.

## **C. RESULTADOS**

### **Resumen de la evidencia identificada**

Se identificaron 420 títulos en L·OVE, y 217 revisiones sistemáticas y 490 ensayos clínicos en la búsqueda adicional. Luego de eliminar duplicados y excluir por título y resumen quedaron 4 revisiones sistemáticas y 7 ensayos clínicos para revisión de texto completo.

Finalmente, no se encontraron revisiones sistemáticas ni ensayos clínicos que se relacionaran a la pregunta de manera directa ni indirectamente. El flujograma de selección se presenta en el Anexo 3.

### **Selección de la evidencia**

No se encontraron revisiones sistemáticas ni ensayos clínicos que se relacionaran a la pregunta de manera directa ni indirectamente

### **Estimador del efecto**

No se encontraron revisiones sistemáticas ni ensayos clínicos que se relacionaran a la pregunta de manera directa ni indirectamente

### **Metanálisis**

No se encontraron revisiones sistemáticas ni ensayos clínicos que se relacionaran a la pregunta de manera directa ni indirectamente
