INFORME DE ESTRATEGIAS DE BÚSQUEDA DE VALORES Y PREFERENCIAS DE LAS PERSONAS

Guía de Práctica Clínica Demencia tipo Alzheimer 2021

Uno de los factores a considerar para formular una recomendación en Guías de Práctica Clínica con la metodología “*Grading of Recommendations Assessment, Development and Evaluation*” son las preferencias u opiniones de los pacientes, permitiendo abordar y elaborar recomendaciones con criterios no solo técnicos y científicos. Conocer la perspectiva de los pacientes, aporta una visión más integral sobre temas importantes y pertinentes para ellos, como su opinión y punto de vista acerca de resultados de salud, riesgos y beneficios, preferencias sobre tratamiento y cuidados, impacto de su condición de salud sobre su vida y entorno, y sobre sus necesidades de información y apoyo¹.

ESTRATEGIA DE BÚSQUEDA

Se realizó una búsqueda específica por pregunta que consideró revisiones sistemáticas y estudios primarios (cualitativos y cuantitativos) que describen valores, preferencias o percepciones respecto a la enfermedad o calidad de vida de personas con demencia tipo Alzheimer.

Se identificaron términos MESH y texto libre. La búsqueda consideró estudios publicados sin límite de idioma y sin restricción en el periodo de búsqueda. Las **bases de datos consultadas** fueron Medline, EMBASE y LILACS.

Una vez ejecutada la búsqueda, se evaluaron los títulos y resúmenes de los estudios encontrados y se filtraron los artículos potencialmente relevantes para ser revisados a texto completo, finalmente se seleccionaron aquellos artículos pertinentes y se realizó un resumen por pregunta.
